

Nimbus Notes - Release Notes (PDF export sample)

Version 5.2 introduced end-to-end encryption for individual notebooks on the Pro and Team plans. When enabled, notes in that notebook are encrypted with a key derived from your passphrase before they leave your device.

If you forget the passphrase for an end-to-end encrypted notebook, the notes cannot be recovered - there is no passphrase reset, and Nimbus support cannot help. Keep your passphrase somewhere safe.

This page exists so the chunking lab can demonstrate loading text out of a real PDF with pypdf before splitting it into chunks.
